

Eye Drops For Your Cataract Surgery

You will use a total of 4 different eye drops for your upcoming eye surgery.

3 Days Before Surgery

Zymar
(*BEIGE* CAP BOTTLE)

Instill 1 drop into the surgical eye 4 times a day while awake beginning 3 days before surgery, including the morning of surgery.

NOTE: This drop will also be used after surgery- do not discard!

Day of Surgery

Phenylephrine **AND**
Cyclopentolate
(*RED* CAP BOTTLES)

Instill 1 drop of each into the surgical eye, waiting 5 minutes between drops:

- **60 mins before leaving for surgery, then**
- **30 mins before leaving for surgery, then**
- **again just before leaving for surgery**

Bring these drops with you to surgery

After Surgery

Prednisolone Acetate (*WHITE* CAP)
AND
Zymar (*BEIGE* CAP)

Instill 1 drop of each medication 4 times a day into the surgical eye, until further instructed by your doctor. Please wait at least 5 minutes between drops. Be sure to shake the Prednisolone bottle well
