Actually, there are two main kinds of cholesterol: Good cholesterol and bad cholesterol.

1. **Good cholesterol, or high-density lipoproteins (HDL)**, picks up the bad cholesterol in your blood and takes it to the liver where it’s removed from the body. HDL cholesterol lowers the risk of heart disease and stroke. Exercise increases the amount of HDL.

2. **Bad cholesterol, or low-density lipoproteins (LDL)**, picks up cholesterol from the liver and fatty foods and delivers it to the cells. When your body has more cholesterol than it can handle, the extra cholesterol sticks to your artery walls. Too much LDL cholesterol will end up blocking the arteries, making it hard for the blood to flow normally. This can eventually lead to heart disease. But there are things you can do. Getting enough exercise and healthy eating lower the amount of LDL (bad cholesterol).

### How do I make sure my bad cholesterol is low?

1. **Cut down on fat.** Many of our foods are loaded with fat. Changing to lower fat foods can be an easy way to help lower your bad cholesterol.
   - Choose nonfat or low-fat foods and milk. Choose foods that have little or no saturated fat. Skip fried food.
   - Read food labels. Avoid food with trans fat (hydrogenated oils).
   - Fill up on whole grains, lean protein, and fruits and vegetables. (Aim for 5–9 servings of fruits and vegetables a day.)

### 2. Get fit.** Try to get at least 60 minutes of exercise a day. Aerobic exercise (like walking, running, swimming, roller blading, or basketball) is the best way to keep your heart in great shape.

- Join a sports team at school or at the community center.
- Find a friend to jog, bike, shoot hoops, or play tennis with.

### 3. Don’t use tobacco.** Cigarettes, cigars, and chewing tobacco increase your chances of heart disease by lowering your good cholesterol.

- Call your doctor or nurse practitioner for help quitting.
- The California Smokers’ Helpline is a free service made for teens to help you kick the habit. Call 1-800-NO-BUTTS to get help.
- Visit “Quit Smoking” at [kp.org/quitsmoking](http://kp.org/quitsmoking)

### Who should be tested (screened) for cholesterol?

Kids and teens whose parents or grandparents have a family history of early heart disease should be tested for cholesterol. Think about getting a cholesterol test if:

- Your parent or grandparent had a heart attack or stroke before the age of 55 years for men and 65 years for women.
- Your mom or dad has high cholesterol (240 mg/dl or higher).
How do I get my cholesterol tested?

Your doctor or other medical professional can order a simple blood test. This test usually reports results as “Total Cholesterol,” but it often gives more information about HDL (or “good” cholesterol) and LDL (or “bad” cholesterol) scores. Basically, you want low scores for both total cholesterol and LDL cholesterol and higher numbers for HDL cholesterol.

Here is a guide for understanding your total cholesterol score:

<table>
<thead>
<tr>
<th>Risk</th>
<th>Total Cholesterol Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>Low</td>
<td>Under 170 mg/dl</td>
</tr>
<tr>
<td>Borderline</td>
<td>Between 170-199 mg/dl</td>
</tr>
<tr>
<td>High</td>
<td>200 mg/dl or higher</td>
</tr>
</tbody>
</table>

What should I do if I have high cholesterol?

There are many ways to begin to lower your cholesterol. The most important changes you can make are eating healthy and being active. This way, not only will you feel and look better, but you’ll be lowering your cholesterol and making your heart strong.

Healthy eating

• Eat more fish. Most fish has a special kind of fat that helps lower cholesterol.
• Eat more foods high in fiber. One serving is equal to a piece of fruit or 1/2 to 1 cup of vegetables.
• Limit soda, sports drinks, juice and sweetened drinks. Having one can of soda is like drinking a candy bar!
• Keep healthy snacks for between classes or after school. Pretzels, bagels, air-popped popcorn, and baby carrots are easy to keep in your backpack.
• Choose low-fat foods more often. Low-fat foods contain 3 grams of fat or less per serving. Check out the label for fat content and serving sizes.
• Talk to your family about choosing low-fat and low-cholesterol meals.
• Eat less red meat.
• Eat fewer fatty foods.

Activity and exercise

• Choose exercise that is fun for you and make it part of your routine.
• Limit screen time (TV, computers and video games) to 1–2 hours a day. Swap an hour of TV time for a fun new activity.

What if I like fast food?

All fast food isn’t bad. Watching what you eat and how often you eat it can help reduce the fat and cholesterol in your fast-food meals.
