- ** Take Ondansetron anti-nausea medication 1-hour before the taking the Temodar.
- ** Take the Temodar at bedtime – no food for an hour before or an hour after the Temodar.
- ** Record all side effects on calendar & bring to your doctor appointment.

Kaiser Permanente Neuro-Oncology
1150 Veterans Blvd, RWC 94063
Phone 650.299.2290 option 4
Fax 650.299.3052

*** NOTE: This is intended to be a guide only and your individual chemotherapy plan needs to be discussed with your physician or nurse practitioner.

Daily Temodar Chemotherapy during Radiation Therapy

WEEKLY Labs are required - No fasting is necessary

Get these labs drawn at your local KP at least once before starting the treatment and then every week during the concurrent chemoradiation. Please get the labs done during the week, such as on a Tuesday, Wednesday, or Thursday, so that any abnormal results will be viewed by the neuro-oncology staff during the work-week so that we may intervene if necessary.

We will not routinely contact you if the labs are within an acceptable range, however will contact you if there is an abnormal result that requires an action/intervention. You are welcome to contact us as anytime if you have questions or concerns about your labs or other health issues.

**- CBC with Differential (Complete blood count)
Needs to be checked every WEEK**

**- Comprehensive metabolic panel (liver & kidney tests)
Only to be checked once per month**

MRI brain and another neuro-oncology visit should occur 2-4 weeks after the radiation is completed.

- ** Take Ondansetron anti-nausea medication 1-hour before the taking the Temodar.
- ** Take the Temodar at bedtime – no food for an hour before or an hour after the Temodar.
- ** Record all side effects on calendar & bring to your doctor appointment.
